INTRODUCTION

The BPI Network Content Catalogue presents a decade of primary research into the issues, problems, priorities and needs of innovation and transformation leaders worldwide. This deep, practitioner-based knowledge spans many strategic innovation imperatives and digital transformational challenges facing B2B and B2C companies in all major industry sectors. The evergreen content is a valuable resource for corporate teams, channel partners, technology vendors, as well as business school students, educators and academics.
Business Model Innovation
Innovation: The New Competitive Equation

In today’s innovation economy, institutions of all types and sizes are challenged to rethink and redesign the future. To do so, they must embrace innovation-driven business cultures, processes and platforms, break down barriers to change, and empower innovation leaders and thinkers across and beyond corporate boundaries.

This report looks at what leading executives around the world are saying and doing about innovation within their organizations and the roadblocks, accelerants, challenges and opportunities they see. The findings are based on a survey of more than 200 top executives across the globe, coupled with qualitative interviews from innovation leaders at BASF, Coca-Cola, Dell, Intel and Johnsonville.

Process Innovation
Getting Serious About Omni-Channel Experience

Today’s omni-channel consumer expects a seamless journey across both physical and digital channels. Personalization and real-time, always on experiences are a core demand for consumers who expect that each and every experience delivers value to their unique journey.

But this expectation has shone a harsh spotlight onto two critical players in the omni-channel experience: the brands creating these connected engagements and the communication service providers upon whose networks these experiences rely.

The increasing imperative for omni-channel engagements has created an imperative for new partnerships between telecommunications providers and brands, establishing new opportunities for telcos to emerge as the “secret ingredient” to dynamic brand engagements.

Become an Agile Organization

Assessing new tools and platforms helping companies improve speed, predictability and accuracy to create more agile businesses

Accelerate How You Innovate

Exploring how big data has changed the very nature of business and how new organizations are responding to that challenge

Business Gain From How You Retain

Driving customer equity and lifetime value by turning customer insight and intimacy into a hallmark of the organization

The Power of Personalization

Actionable insights on establishing strategies to better engage the audience of one
Accelerate How You Differentiate

Establishing an alert enterprise demands internal structures, cultures and capabilities focused on rapid identification and action.

Business Traction From Better Decision Action

In an age of accelerated business cycles, effective executive decision-making processes are critical to success.
Technology Innovation
The Impact of Connectedness on Competitiveness

The Industrial Internet of Things will transform business and industrial performance, delivering significant improvements in operational efficiency and uptime, as well as growth from new business models, products, services and customer experiences.

Still, despite keen interest and growing expectations, most companies are unprepared to take advantage of IIoT technology and have no clear strategic roadmap or implementation plan.

This report reveals that industries are combatting a plethora of challenges on the road to IoT, ranging from a lack of technical and analytical skills, to the need to rethink business models, to increased complexity around platform and industry standards and partner collaboration.

Gain the Ability for Cloud Agility

How enterprises can leverage multi-cloud strategies to keep pace with dramatic growth in unstructured data and the need to cost efficiently manage it

Bringing Dexterity to IT Complexity

A look at what the IT frontline is experiencing on the ground and how they can successfully transform to meet business expectations

Accelerating Business Transformation Through IT Innovation

Analyzing the priorities of IT executives seeking to drive growth through the use of modern transformative technologies

Making Sense of Subscriber Complexity

Understanding the intersection of service, experience and opportunity for mobile service providers
Lean & Green Leadership

IT organizations address the accelerating energy demands and rampant waste of the data center to increase yield and data productivity

Think Eco-Logical

The progress and pitfalls IT organizations face on the road to sustainability in the era of GREEN
Financial Innovation
Progressive CFOs: Inspired by What’s Required

Financial executives at large global organizations are living in interesting times. They are in the midst of transforming financial reporting and planning processes to address the growing demands of external and internal stakeholders for better, more varied and meaningful information and analysis.

This study examine the growing challenges and requirements of finance executives as they seek to meet demands for improved accuracy and timeliness in delivering much-needed and greatly expanded information to external and internal audiences. It also looks at the new platforms and processes that financial organizations need to improve their capacity to deliver.

Purpose-Built Insurance

Perfect How You Project

Addresses the challenges facing companies developing world-class go-to-market capabilities as marketing and sales leaders struggle to improve
Operational Innovation
Competitive Gain in the Ocean Supply Chain

The global maritime shipping industry is in the midst of a significant transformation to increase efficiency, visibility and customer service. Transformative technologies have the potential to significantly improve performance and transparency across a supply chain that has historically been riddled with inefficiencies and lack of collaboration.

This report dives into an industry-wide discussion about the economic, business and supply chain process and technology challenges facing the ocean shipping supply chain. The study delves into the need to upgrade legacy infrastructure, and explores which technologies can both improve efficiency and grow demand.

The Navis Business Bellwether

A benchmark survey of the shipping industry to monitor sentiment and priorities across a variety of economic, business and operational issues.

Competitive Gain in the Demand Chain

Marketers are struggling to give strategic priority to streamlining the marketing operational mix.

Define Where to Streamline

Addresses the impact of obsolescence and brand waste across the marketing supply chain.

Acceleration of Eco-Operation

Enhancing trading partner visibility, flexibility and new levels of sustainability across the entire demand and supply ecosystem.
Calibrate How You Operate

Establishing an operational model that accounts for teams, platforms and the critical data that must flow from customer to brand

Garbage is a Terrible Thing to Waste

A comprehensive report on the management of biodegradable waste at American organizations

Performance and Talent Management Trend Survey

Organizations struggle to find, retain, motivate, and develop their people adequately as they face an increasingly competitive talent landscape

Uptime at Crunchtime

Assesses the issues, obstacles, and imperatives around maintaining operational uptime in the face of exploding data demands
Organizational/Functional Innovation
Doing More With Data

The three critical functions as it relates to customer engagement: marketing, commerce and supply chain, must work together to elevate data strategies. This report highlights the challenges facing each of these functions when it comes to how data strategies are being challenged and transformed. It also highlights how each individual function aligns, and sometimes clashes, in their perceptions of where and how each function must collaborate around the customer.

The research stems from a survey of 165 marketing, commerce and supply chain executives, as well as 12 deep-dive interviews with executives who reveal the ways they are rethinking their engagement strategies through smarter use of data insights. Those executives hail from brands like AT&T, The Body Shop, Samsonite, REI, Ryder, TD Bank, Cabela’s and Nordstrom.

Parental Burnout Crisis in Corporate America

In a world in which both parents typically work, employers need to do more to address and mitigate the challenges of worn-out parents.

Know More to Grow More

Understanding how gaps in the customer intelligence process impacts how the front-line capitalizes on moments of opportunity.

Big Data’s Biggest Role: Aligning the CMO & CIO

Greater partnership between the CMO and CIO drives enterprise-wise customer centricity.

The CMO-CIO Alignment Imperative: Driving Revenue through Customer Relevance

Data, digital and the explosion of mobile can either drive the CMO and CIO together or tear operations apart.
Closing the Gap

Outlines the key issues, challenges and points of disconnection that threaten sales and marketing alignment
Product/Service Innovation
When Technology Needs to be Tougher

The growing proliferation of mobile computing and wireless communications in every aspect of industrial life, including the advent of IoT-enabled connected machines and devices, is creating a growing need for ruggedized computing solutions that can stand up to the toughest and most harsh operating conditions.

Especially in industries like defense, aerospace and rail, the need is growing for computing and network-centric solutions capable of operating under extreme pressures, temperatures, vibrations, dust conditions and other factors.

This report looks at this growing market need through the eyes of a ruggedization innovator. It underscores the needs for ruggedized computing across aerospace, defense and rail.

Getting Control of Document Flow

Explores the incidence, prevention practices, and ramifications of document security breaches for organizations of all sizes.

Dealing with Document Deluge and Danger

Exploring the value, challenges, disconnects and new requirements surrounding document creation, processing and sharing.

Grow Smart From the Start

To fuel growth, the financial services industry must leverage the right technologies to evolve mobile banking, compliance and security.

Planning for Growth

How Fortune’s fastest growing company, Jazz Pharmaceuticals, harnessed the cloud for corporate agility.
The Remote Revolution

The dawn of the remote workforce is compounding the need for flexible mobile engagement, messaging and data.

Market Vigilance, Product Diligence

Real-time intelligence is imperative to inform decisions in critical areas such as competitive analysis, product forecasting and pricing.
ABOUT BPI NETWORK

The Business Performance Innovation (BPI) Network is dedicated to high-level knowledge exchange, thought leadership and personal relationship building among innovation-minded senior executives in strategy, finance, operations, product development and boardroom roles across a wide-range of global industries. The BPI Network has a membership of nearly 2,000 executive innovation leaders. In addition, over 60,000 global executives covering multiple industries, segments and markets consume our content and thought leadership. Key corporate decision makers, business buyers and influencers within large and mid-sized organizations worldwide comprise our membership and audience.
